

## Basics of a ResearchMap

The following five steps are basic elements of a ResearchMap.

- 1) Specify equations 
- 2) Conduct estimations  to produce initial fits
- 3) Using errors  to conduct diagnostics that may lead to equation modification (back to step 1)
- 4) Final estimation  to be produced
- 5) Explaining  the results

Per work of the RM Institute, many complicated ResearchMaps are just combinations of the above five steps.
